

# Skin Top Yoghurt filling plant

## Mode of operation

One mobile unit for filling of hot milk 90°C.

The unit is build on a stainless steel frame supported on 4 wheels, two of which are of the swivel type. It has a balance tank for hot milk, a product pump and a pressurized vessel with automatic pressure control.

From the pressure vessel five outlets are equipped with flow meters each leading to a 6 m hose at the end of which is arranged a push button operated filling “gun”.

The filling volume is adjustable from the control panel. The capacity depends upon the head space in the cups and the skill of the operator. An estimate will be 5.000 1L Cups/hour.

The unit is arranged for CIP cleaning and can be hooked up to a central CIP plant.

## Automatic Sealing machine for skin-top yoghurt

Primodan also delivers automatic sealing machines for skin-top yoghurt. For further information please contact Primodan.

Primodan reserves the right to make alterations without prior notice.
