

DELTA ROBOT

Innovative robot solutions

Technology

Delta 3D Robot solutions are a very fast working robot, delivering up to 200 cycles/minute and can be synchronised with several conveyors for pick and place operations.

The controller has a response time of 2 ms, when controlling 8 Delta Robots or 1 ms when controlling 4 robots.

Primodan approach

Primodan is offering several solutions incorporating a robot. For applications where speed and precision in limited space is essential, a Delta robot can be the perfect solution.

The robot has very few wear and tear parts, and makes almost no sound during operation.
