

PRIMOREELS

Innovative lidding solutions

Technology

The Primoreels system allows the customers the possibility of using various materials in thinner gauges than know alternatives.

36 microns metallised PET with Combi heatsealacquer. Primoreels PET foil is a highly diversified lid material with high strength, perforated and wound on reels, ready for sterilizing and dispensing.

The Primoreels system is often integrated on Primodan filling machines, as an cost beneficiary alternative to the traditional Die-cut lidding system. The system offers UV treatment of the 20,000 lids in one reel, perfect peel, puncture resistance, cheaper lidding and a more environment friendly olution than using traditional alu Die-cut foils.

- Soft and constant easy peel properties
- Sealing to PP, PS, PET and PE
- Good mechanical properties
- Hot-fill up to 85°C
- Good aroma, water vapour and gas barrier functionalities.
- Excellent printability, also for demanding multi-colour printing.
- Enables use of metal detectors in product quality control.
